Question 35 of 117

Which of the following drugs decreases tacrolimus levels?

A. Ketoconazole

✓ B. Gemfibrozil

C. Diltiazem

D. Fluoxetine

Commentary

References

Answer: B. Gemfibrozil

All the listed drugs interact with the CYP system in the liver and may affect metabolism of tacrolimus. Recent initiation of gemfibrozil can lower tacrolimus levels.

Answer A. Ketoconazole increases Tacrolimus Levels.

Answer C: Diltiazem increases Tacrolimus Levels Distractor.

Answer D: Fluoxetine may increase Tacrolimus levels.
