Question 38 of 117

The CHAMPION trial investigating the use of the CardioMEMS implantable pulmonary artery pressure monitoring device demonstrated which of the following:

- ☒ **A.** Reduction of HF hospitalizations in all NYHA Class III patients
- ☐ **B.** Reduction of HF hospitalizations in only NYHA Class III patients with LVEF <40%
- ☐ **C.** Reduction of HF hospitalizations and mortality in NYHA Class III patients
- ☐ **D.** Reduction of HF hospitalizations and mortality in NYHA Class III patients with LVEF <40%

Commentary

References

Answer: A. Reduction of HF hospitalizations in all NYHA Class III patients.

The goal of the question is to review the main findings of the CHAMPION trial, which concluded that management of NYHA Class III HF, regardless of LVEF, based on home transmission of pulmonary artery pressure with an implanted pressure sensor (CardioMEMS) has significant long term benefit in lowering hospital admission rates for HF.

Answer B: The CHAMPION results did not vary by enrolled ejection fraction and the trial included HFpEF patients.

Answers C & D: No mortality reduction was seen in the CHAMPION trial.
