Question 8 of 117

A 65-year-old female patient is admitted from the cardiac catheterization laboratory with acute-on-chronic heart failure-related cardiogenic shock. The decision is made to proceed with an intra-aortic balloon pump. After implant, several alarms occur and the following waveforms are observed:

Figure 1 : Intra-aortic balloon pump waveforms

Based on the waveforms in the figure, which of the following most likely represents the problem with the intra-aortic balloon pump?

A. Early inflation

B. Late inflation

C. Early deflation
